

DESKTOP Quick Guide

Quick Guide **DESKTOP**

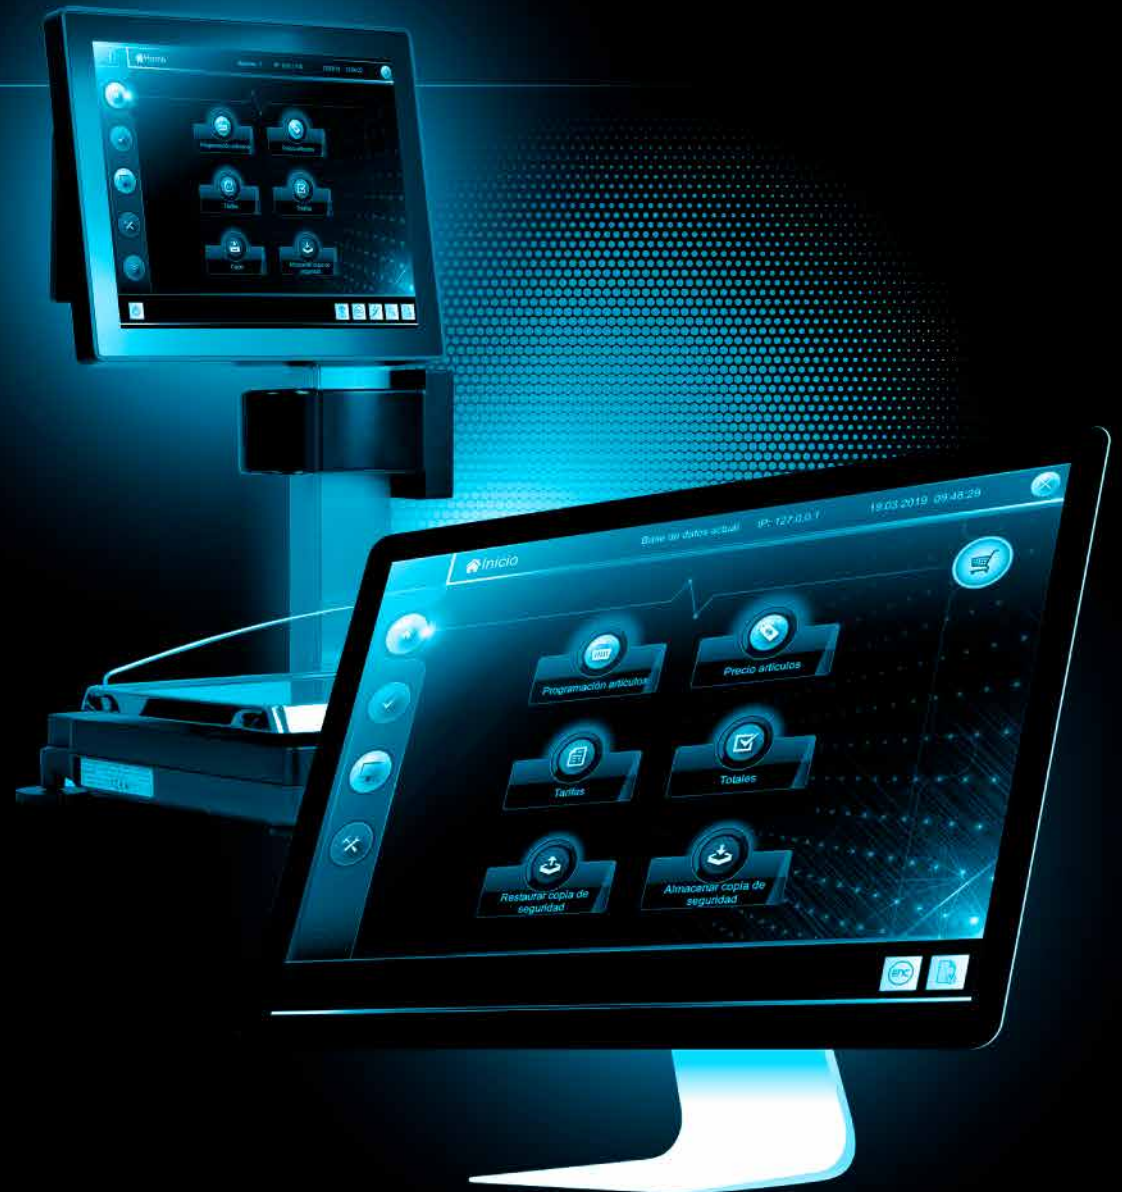

TouchScale / K-Scale

The K-Scale-TouchScale Desktop application is intended to be a high operational connecting link between the scale and the PC making possible to manage the most important information on the scale remotely from the latter.

Desktop will provide you with information and ability to immediately edit the database of products, sales, inventory, listings, marketing tools integrated into your scale such as playlists, videos and images, tracking loyalty points for customers, among others.

In addition to the real-time access to the scale, Desktop is characterized by an attractive, simple and intuitive interface, based on the software of the scale itself, having a similar aesthetic with the same functions.

This guide will be useful to know the different functions that Desktop offers you as well as the different levels available in the application, with which you will familiarize with the use of the scale in a simple and fast way.
